

Carriage Rollers

Carriage Rollers - Carriage rollers are especially designed bearings which are used on lift masts so as to help them work in tough environmental surroundings. Lift masts are often subjected to oscillations, shocks, vibrations and high dynamic and static loads. This apparatus is often exposed to environmental influences like dust, cold, heat, contamination, aggressive ambient air and moisture. Thus, the lift masts' guidance arrangements should be particularly strong and have a specific high load carrying capacity.

So as to help compete in numerous different environmental surroundings, carriage rollers were designed for a lot of lift masts. While having the ability to handle a specifically high load carrying capacity, these bearings provided a cost-effective operational security for the lift masts' guidance arrangements.
